CUTTING PLANS AND CAMPAIGNS

6 cutting plans. Each plan is one DXF, cut the same way on every sheet that uses it: same specimens, same notch codes. A campaign = a set of plans.
The campaigns are nested (C inside B inside A), so they reuse the same plans: P1 is in every campaign, P2 and P3 in A and B.

Circle = the plan is in the campaign; number = the sheet of the campaign it is (order of cutting). Index of the notch code = strain rate: slow 1-3, medium 4-6, high 7-9 (shear 1-2, 4-5, 7-8).
P6 = P1 + P2 + P3 on one large sheet (the same 190 pieces and codes); the 600 × 500 plans stay for the 600 × 500 sheets. Orders in cutting-sheets/orders/<order>.yaml.
