CAMPAIGNS A, B AND C · SHEETS

One row per campaign, its sheets in order. The campaigns are nested (C inside B inside A, same codes), so their first sheets are the same.

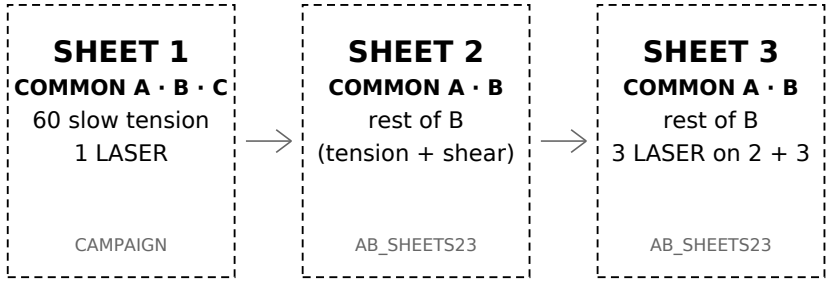

CAMPAIGN A

4 sheets

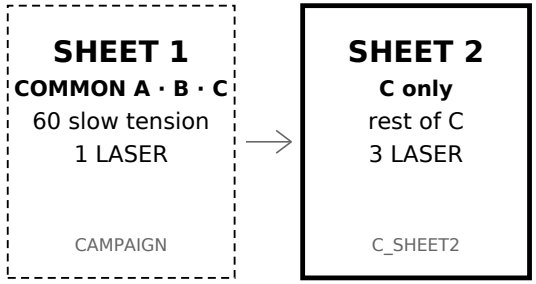

CAMPAIGN B

3 sheets

CAMPAIGN C

2 sheets

dashed: common sheet, identical in the campaigns named on it

thick: sheet of one campaign only

Notch code: same specimen = same code in A, B and C; index = strain rate: slow 1-3, medium 4-6, high 7-9 (shear: 1-2, 4-5, 7-8).

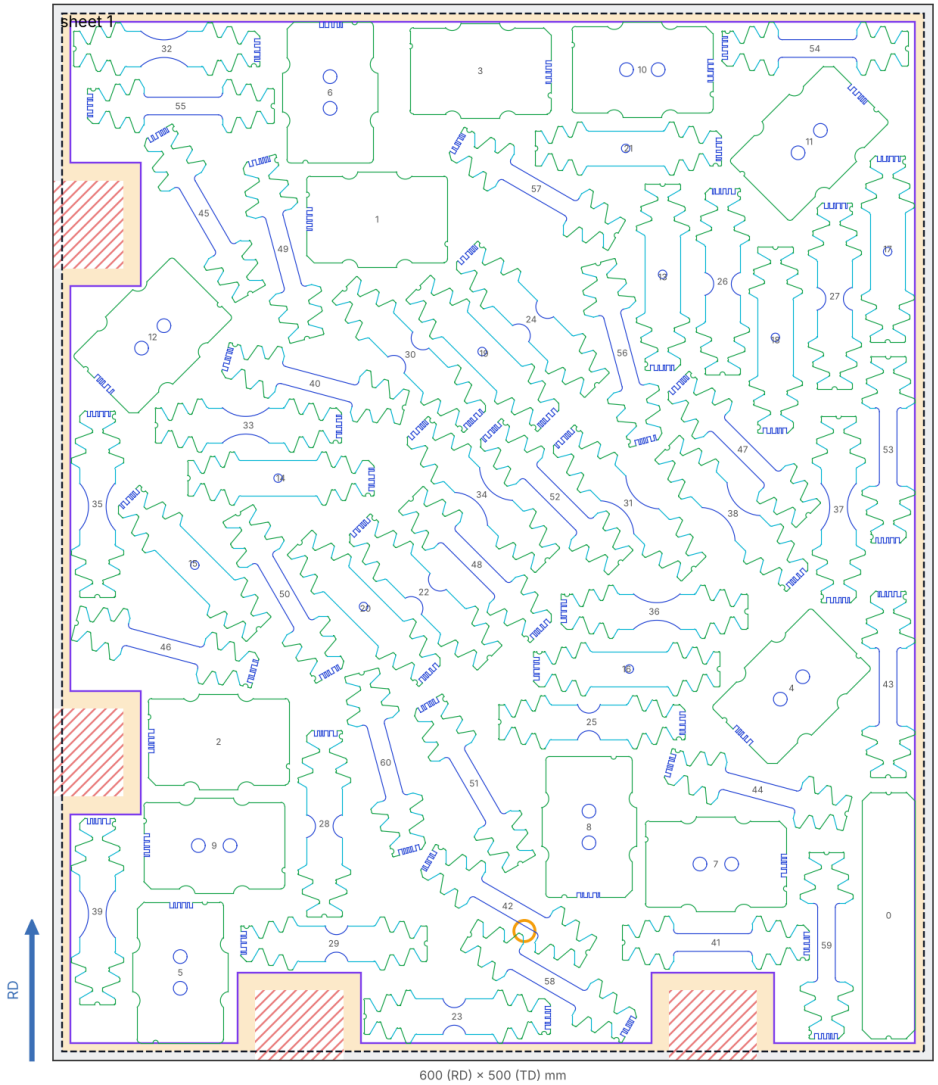

Orders in cutting-sheets/orders/: name shown under each sheet + _600x500mm_WATERJET.yaml.

Shear specimens may be mixed with the others (user, 12/11/2026).

SHEET 1 · campaigns A, B and C

60 slow-rate tension-type specimens + 1 LASER · order CAMPAIGN_600x500mm_WATERJET

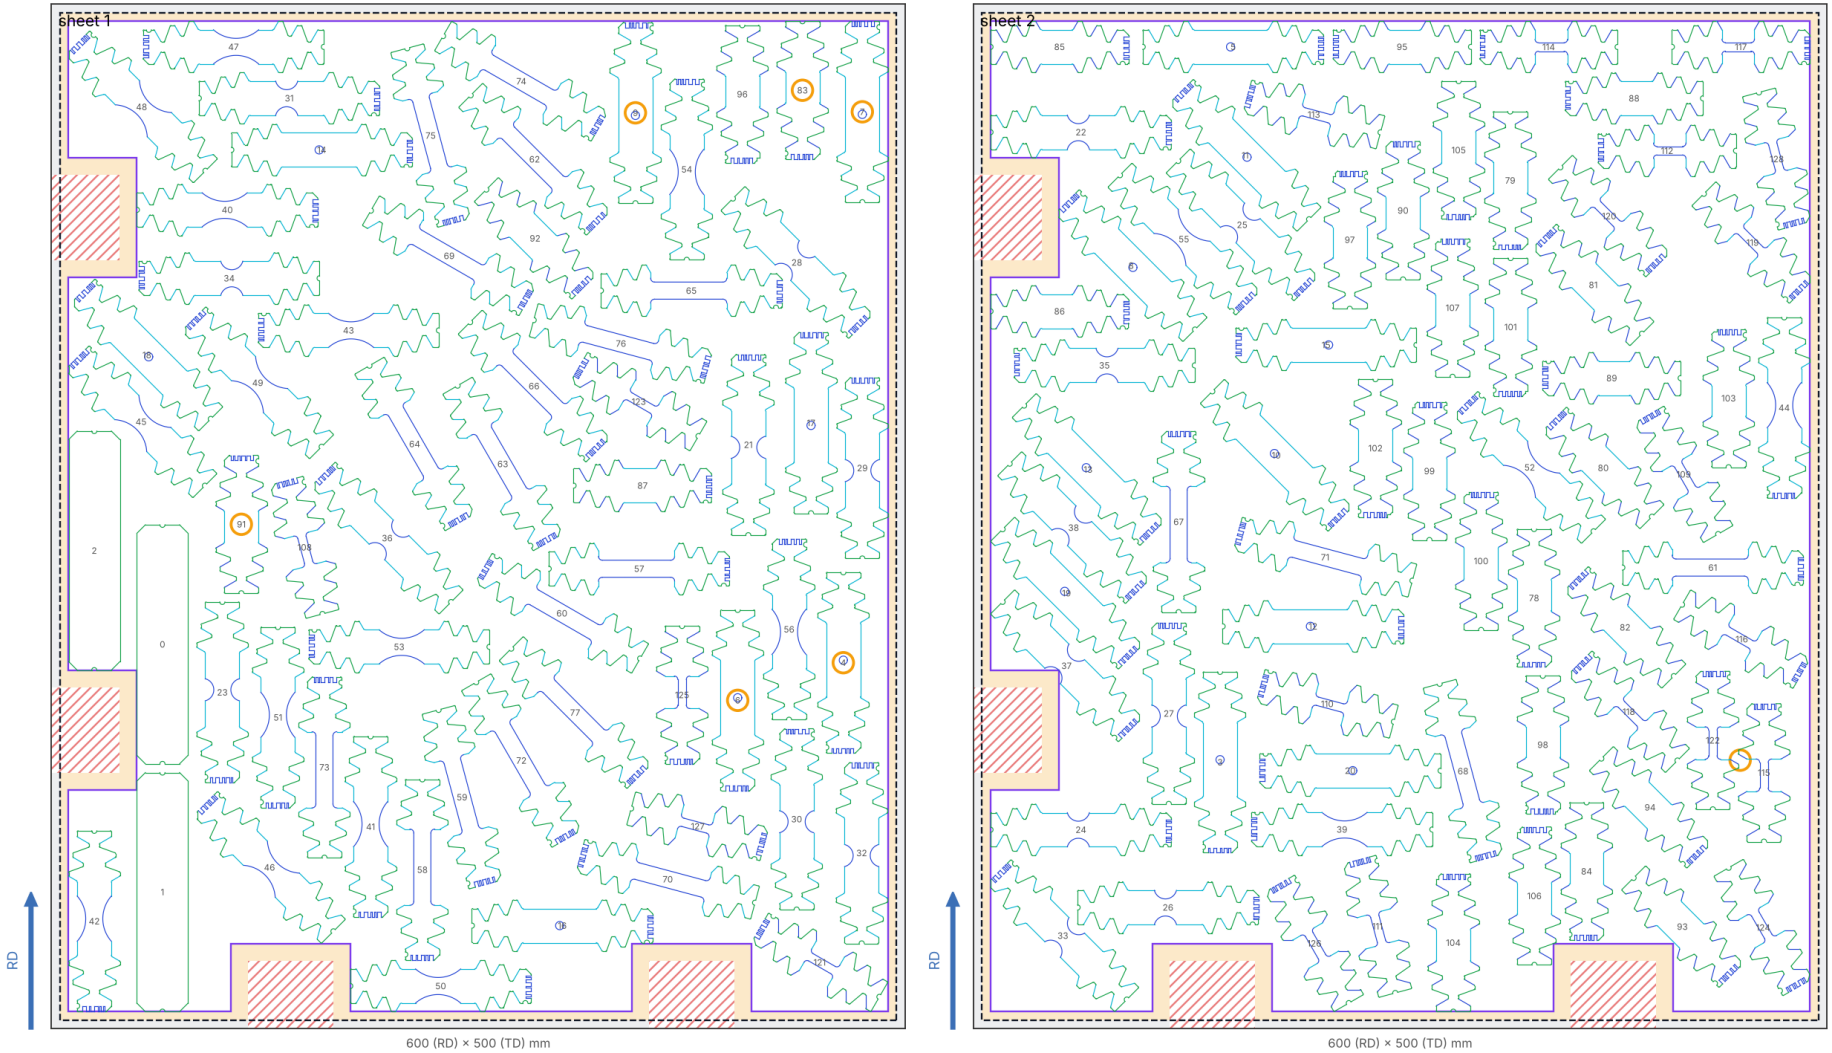

CAMPAIGN_600×500mm_WATERJET.dxf – red circle: blocking problem, orange: to check; small numbers: piece index

SHEETS 2 AND 3 · campaigns A and B

the rest of campaign B: 126 specimens (tension-type and shear) + 3 LASER (61 + 68 pieces) · order AB_SHEETS23_600x500mm_WATERJET

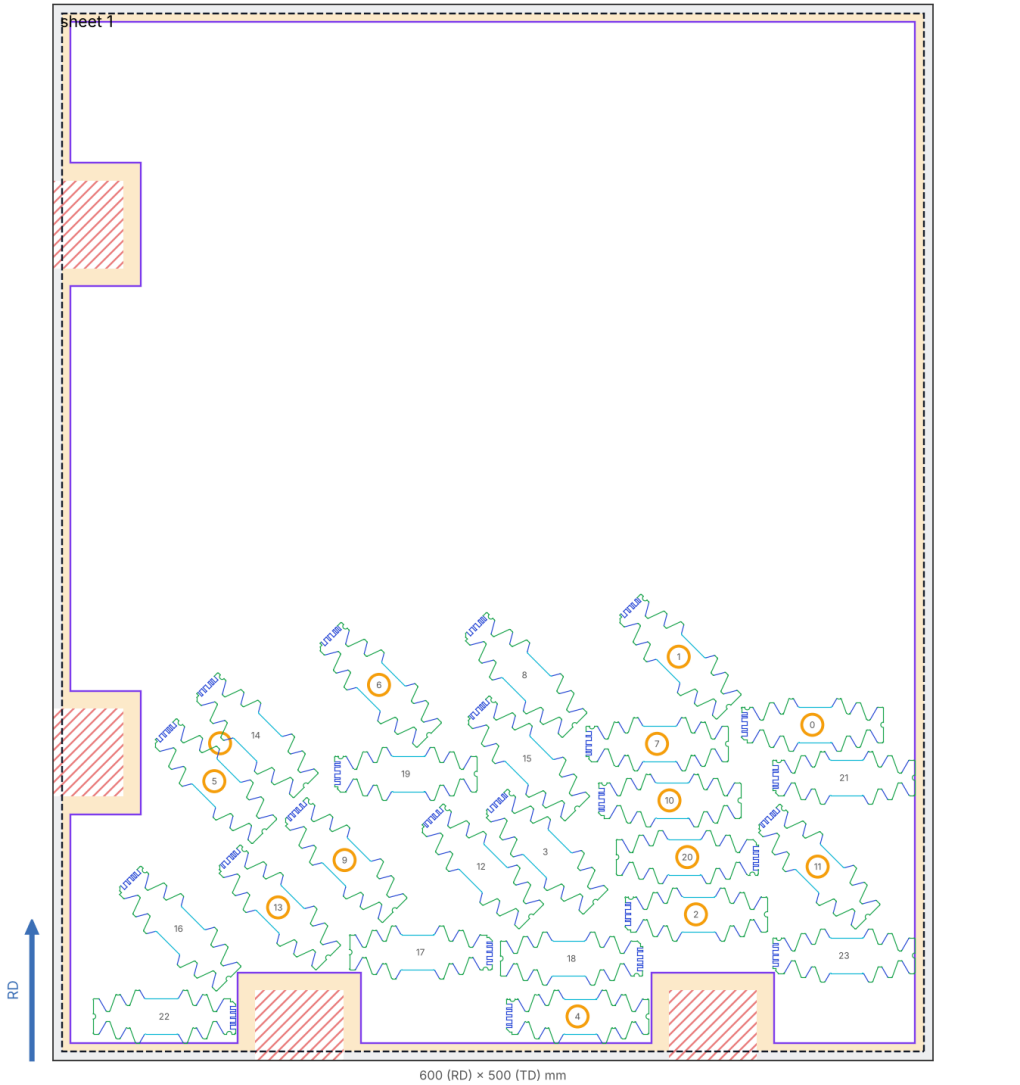

AB_SHEETS23_600×500mm_WATERJET.dxf – red circle: blocking problem, orange: to check; small numbers: piece index

SHEET 4 · campaign A only

24 shear specimens: SHLD and SHHD at 45 and 90 deg, all rates · order A_SHEET4_600x500mm_WATERJET

A_SHEET4_600×500mm_WATERJET.dxf – red circle: blocking problem, orange: to check; small numbers: piece index

SHEET 2 OF C · campaign C only

the rest of campaign C: 46 specimens (shear and 0 deg medium / high rate) + 3 LASER · order C_SHEET2_600x500mm_WATERJET

C_SHEET2_600×500mm_WATERJET.dxf – red circle: blocking problem, orange: to check; small numbers: piece index
