MATERIALS · TEMPLATES ON EACH SHEET

One page per material: the modules it gets, the template (one sheet of a module) on each of its sheets, and the templates drawn on the real sheets. Best sheets first, fullest templates on the best sheets; RD of the template = RD of the sheet; template in the bottom-left corner (clamp corner).
CODES: notch codes of all the specimens of the material, checked unique per specimen type (code = angle digit + index). Last page: the different templates and their total.
